Problem No. 01

Name of the problem:

Write a C program to find the Winner of Rock Paper Scissor Game Among Two Users

Introduction

Implementing program in C is very interesting. To implement the problem given above we should remember the procedure to display outcome. That is, we should consider about the required inputs, the particular process that will be applied upon the input data and the output whether it is desired or not. The given problem gives me an opportunity to have an exercise on the procedure.

Program:

```
//Rock Paper Scissor Game
#include <stdio.h>
int main()
{
   char p1,p2;
   printf("\tLets play rock paper scissor.\n\n");
   printf("Player 1 select your Choice.\nAmong Rock, Paper, Scissor\n");
   printf("Press 'r' for Rock\nPress 'p' for Paper\nPress 's' for Scissor\n");
   scanf("%c",&p1);
   printf("Player 2 select your Choice");
   printf("\nPress 'r' for Rock\nPress 'p' for Paper\nPress 's' for Scissor\n");
   scanf(" %c",&p2);
   switch(p1)
   {
   case 'r':
      (p2=='r')? printf("Game Draw!!") : (p2=='s')? printf("Player 1 Win...!!") : printf("Player
2 Win...!!");
   break;
   case 's':
```

```
    (p2=='s')? printf("Game Draw!!") : (p2=='p')? printf("Player 1 Win...!!") : printf("Player 2 Win...!!");
  break;
  case 'p':
    (p2=='p')? printf("Game Draw!!") : (p2=='r')? printf("Player ! Win...!!") : printf("Player 2 Win...!!");
  break;
  default :
    printf("Game Error");
  break;
  }
}
```

Output :

```
        Lets play rock paper scissor.

Player 1 select your Choice.
Among Rock, Paper, Scissor
Press 'r' for Rock
Press 'p' for Paper
Press 's' for Scissor
r
Player 2 select your Choice
Press 'r' for Rock
Press 'p' for Paper
Press 's' for Scissor
p
Player 2 Win...!!

Process returned 0 (0x0)   execution time : 3.902 s
Press any key to continue.
```

THE END
